

What is claimed as new and what is desired to secure by Letters Patent of the United States is:

1. A kit for cleaning pierced body parts and comprising:
 - a floss including a plurality of perforations spaced along a length thereof and for assisting a user to separate said floss at said perforations;
 - an applicator formed to be substantially tubular and having opposed end portions for passing said floss therethrough, said applicator including a longitudinal axis and an inner surface substantially equally spaced thereabout; and
 - a disinfectant substance coated on said inner surface and being transferable onto said floss as same passes through said applicator so that a pierced body part may be cleaned as said floss is passed therethrough.
2. The kit of claim 1, further comprising a dispenser for housing said floss and having an aperture formed therein for allowing said floss to be selectively removed therefrom.
3. The kit of claim 1, further comprising a packaging for housing said floss therein.
4. The kit of claim 1, wherein said floss is formed to be flexible.
5. The kit of claim 1, wherein said applicator has a substantially cylindrical shape, said opposed end portions being open and having substantially equal diameters.
6. The kit of claim 1, wherein said disinfectant substance comprising peroxide.
7. The kit of claim 1, wherein said disinfectant substance comprising antibiotic ointment.
8. The kit of claim 1, wherein said disinfectant substance comprising alcohol.

9. An apparatus for cleaning pierced body parts and comprising:
- a floss including a plurality of perforations spaced along a length thereof and for assisting a user to separate said floss at said perforations;
 - a plurality of applicators formed to be substantially tubular and having opposed end portions for passing said floss therethrough, said plurality of applicators including a longitudinal axis and an inner surface substantially equally spaced thereabout, respectively;
 - a cleaning substance coated on said inner surface and being transferable onto said floss as same passes through said plurality of applicators respectively so that a pierced body part may be cleaned as said floss is passed therethrough; and
 - a dispenser for housing said floss and having an aperture formed therein for allowing said floss to be selectively removed therefrom.
10. The apparatus of claim 9, further comprising a packaging for housing said floss therein.
11. The apparatus of claim 9, wherein said floss is formed to be flexible.
12. The apparatus of claim 9, wherein said plurality of applicators have a substantially cylindrical shape, said opposed end portions being open and having substantially equal diameters.
13. The apparatus of claim 9, wherein said cleaning substance comprises peroxide.
14. The apparatus of claim 9, wherein said cleaning substance comprises antibiotic ointment.
15. The apparatus of claim 9, wherein said cleaning substance comprises alcohol.

16. A kit for cleaning pierced body parts and comprising:

a floss formed to be flexible and including a plurality of perforations spaced along a length thereof and for assisting a user to separate said floss at said perforations;

a plurality of applicators formed to be substantially tubular and having opposed end portions for passing said floss therethrough, said plurality of applicators including a longitudinal axis and an inner surface substantially equally spaced thereabout, said plurality of applicators having a substantially cylindrical shape, said opposed end portions being open and having substantially equal diameters;

a sterilizing substance coated on said inner surface and being transferable onto said floss as same passes through said plurality of applicators respectively so that a pierced body part may be cleaned as said floss is passed therethrough; and

a dispenser for housing said floss and having an aperture formed therein for allowing said floss to be selectively removed therefrom.

17. The kit of claim 16, further comprising a packaging for housing said floss therein.

18. The kit of claim 16, wherein said sterilizing substance comprises peroxide.

19. The kit of claim 16, wherein said sterilizing substance comprises antibiotic ointment.

20. The kit of claim 16, wherein said sterilizing substance comprises alcohol.
